

In-Spec Team Work Journal

Simple User Manual

For crew members and supervisors — everyday use

App website: <https://inspecworkjournal.streamlit.app/>

This guide explains how to sign in, write a daily log, review past entries, and download an Excel overview. You only need the website link and the login your administrator gives you.

1. What this app is for

The In-Spec Team Work Journal is a **shared daily log** for the crew. Use it to:

- Record what was done each day on a job site
- Note weather, hours, materials, issues, and safety
- Look up past entries
- Download an Excel spreadsheet overview of the logs

Everyone with a login uses the **same** shared journal.

2. How to open the app

- Open a web browser on your phone, tablet, or computer (Safari, Chrome, Edge, etc.).
- Go to: **<https://inspecworkjournal.streamlit.app/>**
- Sign in with the **email and password** given to you by your admin.

Tips

- Bookmark the page so you can open it quickly.
- The first load of the day can take a few seconds while the site wakes up.
- Use **Sign out** (sidebar) when you finish on a shared device.
- If you do not have a login, ask your admin — you cannot create an account yourself.

3. The menu (left side)

After you sign in, use the left sidebar:

Menu item	What it does
New entry	Write today's (or any day's) work log
Journal	Browse, filter, edit, or delete past logs

Menu item	What it does
Excel export	Download a spreadsheet of entries
Crew & projects	Manage worker names and job sites (usually admin)

4. New entry — daily log (most common)

When: End of shift, or whenever work for a day should be recorded.

Steps

- Open **New entry**.
- Fill in the form (see table below).
- Tap or click **Save entry**.
- Wait for the success message (short thumbs-up celebration).
- The form clears so you can add another entry if needed.

Field	Required?	What to enter
Date	Yes	Day the work was done (defaults to today)
Worker	Yes	Who did the work
Project / job site	Yes	Which site or project
Weather	Yes	Pick from the list
Hours worked	Yes	Hours for that day (e.g. 8 or 7.5)
Work performed	Yes — required	Main description of what was done
Crew notes	No	Who was on site, subs, headcount
Materials	No	Deliveries, materials used, shortages
Issues / delays	No	Delays, missing materials, access problems
Safety notes	No	Incidents, near misses, toolbox talks, PPE

Tips for good logs

- Be specific: “Formed north wall footings; rebar inspection passed” is better than “Worked on site.”
- One entry per person per day is typical; use more if needed (e.g. two sites).
- You can change the Date if you are catching up.
- If Worker or Project lists are empty, an admin must add them under Crew & projects first.

5. Journal — view and fix past entries

- Open **Journal**.
- Use **Filters** (date range, worker, project) if you want a subset.
- Browse the list — each card shows date, person, site, hours, weather, and notes.
- To change an entry: choose **Edit**, update fields, then **Update entry**.

- To remove an entry: choose **Delete**, then confirm. This cannot be undone — prefer Edit for corrections.

6. Excel export — spreadsheet overview

- Open **Excel export**.
- Set the date range (and optional worker/project filters).
- Review the preview on screen.
- Click **Download Excel spreadsheet**.
- Open the file in Excel, Google Sheets, or Numbers.

Sheet in the file	Contents
Export Info	When created, filters used, totals
All Entries	Every matching log (one row per entry)
By Worker	Entry count and total hours per person
By Project	Entry count and total hours per job site

Tip: Export regularly as a backup of your records.

7. Crew & projects — names and job sites

Usually managed by a supervisor or admin.

Workers

- **Add worker** — so they appear in New entry.
- **Deactivate** — hide from new logs; old entries still show their name.
- **Activate** — bring them back to the lists.
- **Delete** — only if they have **no** journal entries. If they have logs, use Deactivate instead.

Projects / job sites

Same rules: add, deactivate, activate, or delete only when unused. This protects history so past logs stay accurate.

8. Quick daily checklist

Step	Action
1	Open the app link and sign in
2	Go to New entry
3	Choose date, worker, project, weather, hours
4	Write Work performed (required)
5	Add optional notes (crew, materials, issues, safety)
6	Save entry
7	Sign out if using a shared device

Weekly or monthly: Excel export → pick the period → download the spreadsheet.

9. Common questions

I forgot my password.

Ask your admin to set a new one. You cannot reset it yourself in the app.

The website is slow the first time.

Normal on free hosting — wait a few seconds. Later use is usually faster.

I don't see my name or a job site.

Ask an admin to add or Activate them under Crew & projects.

Can other people see my entries?

Yes. Everyone with a login shares the same journal. Only invited people can open the app.

Where is the data stored?

In a secure online database, not only on your phone. Entries from any device show up for the team.

Can I use it offline?

No. You need an internet connection.

I saved the wrong day.

Open Journal → find the entry → Edit → change the date → Update.

10. Do's and don'ts

Do

- Log work the same day when possible
- Use clear work descriptions
- Deactivate people/sites instead of deleting when they have history
- Export Excel for important periods

Don't

- Share your password
- Delete entries unless you are sure
- Expect the app to work without internet
- Delete a worker or project that already has log entries (the app blocks this)
